What Scryla Recover Does

Scryla Recover is a simple tool for converting **EPUB files into editable DOCX documents**.

EPUB files are commonly used for distributing ebooks, but they are difficult to edit directly. Scryla Recover extracts the content from an EPUB file and converts it into a Microsoft Word document so you can easily revise, edit, or repurpose the text.

This is useful when:

- You only have the **published EPUB version** of a book
- You want to **recover text from an old ebook**
- You need to **edit or revise an ebook manuscript**

The generated DOCX file preserves the structure of the original ebook as closely as possible, including headings, paragraphs, and images.

Recovering an EPUB File

Using Scryla Recover takes just a few seconds.

1. Open the [Scryla Recover](#) tool.
2. Upload your **EPUB file**.
3. Click **Convert**.
4. The generated **DOCX file** is automatically downloaded.

The DOCX file can be opened in:

- Microsoft Word
- Google Docs
- LibreOffice
- Apple Pages
- Almost any other word processing software

Once converted, the text becomes fully editable so you can make corrections or reuse the content.

Notes and Limitations

While Scryla Recover attempts to preserve the structure of the original ebook, some formatting may require adjustment after conversion.

In particular:

- Highly complex layouts may change slightly
- Custom fonts may not carry across
- Decorative formatting may need minor cleanup

However, the core content (text, headings, and images) will be preserved, making it much faster to recover an editable manuscript than starting from scratch.

Privacy and File Handling

Scryla Recover processes EPUB files automatically in order to convert them into editable DOCX documents.

When you upload a file, it is used **only for the purpose of performing the conversion**. The system extracts the contents of the EPUB and generates a DOCX file which is then made available for download.

Files are handled using the following process:

- The uploaded EPUB file is temporarily stored while the conversion is performed.
- Once the conversion completes, the generated DOCX file is **automatically downloaded to your device**.
- Both the uploaded EPUB file and the generated DOCX file are **automatically deleted from the server within 10 minutes**.

Scryla Recover does **not read, review, store, or reuse** uploaded files. The system processes files automatically and no human access is involved in the conversion process.

Uploaded content is **not used for AI training or analysis**.

Your files remain your work and are handled only long enough to complete the conversion.

If you have any questions about privacy or file handling, please contact:
