

What Scryla Recover Does

Scryla Recover is a simple tool for converting **EPUB files into editable DOCX documents**.

EPUB files are commonly used for distributing ebooks, but they are difficult to edit directly. Scryla Recover extracts the content from an EPUB file and converts it into a Microsoft Word document so you can easily revise, edit, or repurpose the text.

This is useful when:

- You only have the **published EPUB version** of a book
- You want to **recover text from an old ebook**
- You need to **edit or revise an ebook manuscript**

The generated DOCX file preserves the structure of the original ebook as closely as possible, including headings, paragraphs, and images.
